## Graduate Program 2016 – Test Engineering Track

What is your story…now…in a year…in 2 years?
We want to hear it.

This is ours.
At TomTom you will never get bored. We move fast like a "start-up" but have the benefits of a billion euro company. We design and develop innovative products that make it easy for people to keep moving towards their goals.
And we like to have fun. There is no sense coming to a job everyday if you don't like the people you work with.

**Stay with us, it's getting even better.**

For our world-class Graduate Program 2016, we are looking for passionate Test Engineers:

- Would you like to work with innovative embedded technology to develop connected navigation products for the car industry?
- Are you experienced with Automated Test tools such as Robotium, Ranorex, Selenium, Squish, Calabash or (embedded) QTP?
- Are you equipped with programming skills in automation frameworks using Java as well as good scripting skills (e.g. Python, Ruby, UNIX/shell scripting)?
- Do you have less than 2 years of professional experience but already good stories to tell?
- Do you speak English just like Shakespeare but have an international mindset?

Then our Graduate Program is **YOUR** program.

You will feel like a TomTommer in no time, supported by an entire team of experts from HR to Business leaders.

We will make sure we give you the learning and development tools you need to achieve your goals.

You will really be able to make a difference. As part of the Graduate Challenge, you will work on your own ideas for features, improvements and new products, with the opportunity to see your own input come to life in our products.

With great power comes great responsibility; we will encourage you to have a positive social impact beyond the workplace. How? That's up to you. Our commitment is to support you with making a great idea happen.

We believe talent comes from everywhere so we will make sure you get the necessary support in case of relocation.

**Want to achieve even more?**
**Here's a little taste of your upcoming year challenge.**
**You will:**

- Design and develop appropriate test scenarios for embedded custom development solutions to be used in the automotive industry;
- Report defects and provide quality metrics;
- Provide input on the testability of products through analysis and review of customer requirements;
- Identify test automation needs and implement and maintain solutions;
- Identify root cause of defects and work with engineering teams to resolve these;
- Incorporate and manage automated tests as part of the continuous delivery process (e.g. QuickBuild, Jenkins).

**Sounds like you? We want to meet you!**

Apply now and follow us on LinkedIn to make sure you get the entire picture of our Graduate Program.

We're looking forward to receiving your application in English.

**"When is the last time you surprised yourself?" Tell us your story in a cover letter of up to 200 words.**

*Pre-employment verification as well as phone interviews and online assessments are part of the following selection process:*
